Oblasti poslovanja

## Laka industrija

## tekstilna i modna industrija

## Ponuda

## Efficiency boost by cost effective industry 4.0 tools

We solve the most common problems manufacturing companies are facing to when they aim for continuous improvement: lack of easily collected, well presented and utilized data.

In order to do so we've been creating a set of mobile applications, which automatically collect and process information about machine down time, product and process quality on a very cost effective way.

Information is then displayed and utilized for immediate as well as for structured problem solving.

All these helps employees to concentrate on real value added activities for the sake of efficiency, productivity thus competitiveness improvement.

Ključne reči: OEE efficiency industry 4.0 i4.0 mobile apps cloud computing productivity

## **Ponuđena saradnja**

- 1. Tehnicka saradnja**
- 2. Prodaja i distribucija**
